

PLASTIC & PVC PRODUCTS

PVC Pipes & Fittings :

Description:

Polyvinyl chloride, commonly abbreviated PVC, is a thermoplastic polymer. It is a vinyl polymer constructed of repeating vinyl groups (ethenyls) having one hydrogen replaced by chloride. PVC is widely used in construction because it is cheap, durable, and easy to assemble. It can be made softer and more flexible by the addition of plasticizers, the most widely used being phthalates.

Specification :

PVC Pipes

Colour : Blue / Grey

Finishes :

1. One Side Socketed and one side Plain
2. Both side plain

Sizes :

We can supply you with the following sizes and specification :

Diameter : 1/2", 1", 1.5", 2", 4", 6", 8", 10", 12"

Length : 5.8 Mtrs
